

PATENT

Atty. Dkt. No. ROC920010091US1

IN THE SPECIFICATION:

Please replace paragraph [0005] with the following amended paragraph:

[0005] The invention provides a method, article of manufacture and apparatus for displaying compiler optimized source code. Initially, the method generates an optimized source code for an original source code. The optimized source code is displayed on an output device to visually indicate a change performed to the original source code in accordance to a compiler optimization. Additionally, a computer readable medium storing a software program is provided, where the software program, when executed by a computer, causes the computer to perform [[an]] the foregoing method.

[0037] In general, the routines executed to implement [[the]] embodiments of the invention, whether implemented as part of an operating system or a specific application, component, program, object, module or sequence of instructions will be referred to herein as the IDE software 110 or software 110. The software 110 typically comprises one or more instructions that are resident at various times in various memory and storage devices in the computer system 100. When read and executed by one or more processors 102 in the computer system 100, the software 110 causes that computer system 100 to perform the steps necessary to execute steps or elements embodying the various aspects of the invention.
